## Datasheet

| Mouse mAb to | CD26 |
| :--- | :--- |
| Clone | 202-36 |
| Isotype | IgG2b-к |

## Source

A BALB/c mouse was immunized with a T-cell clone.
Fusion partner: NS-1.

## Specifications

202-36 Reacts with human CD26 (Dipeptidyl peptidase IV), a 110 kDa protein which occurs in the cell membrane of T-lymphocyte and is upregulated after activation. CD26 is also present on endothelial cells and also expressed on activated B-cells and natural killer cells and abundantly on epithelia. CD26 is implicated in a variety of biological functions including T-cell activation, cell adhesion with extracellular matrix such as fibronectin or collagens, and in HIV infection. Crosslinking of CD26 using this antibody dramatically enhances the anti-CD3-induced IL-2 production. In Western blotting, this mAb reacts with only glycosylated CD26, but not with deglycosylated froms. It does not prevent ADA binding to CD26. The mAb was clustered at the VI ${ }^{\text {th }}$ WLDA.

## Species reactivity

Figure 1: Human PBL stained with 202-36 (FACS).

Positive: human.

## Applications

202-36 Can be used in frozen sections, flow cytometry, immunoblotting and immunofluorescence.

| Flow cytometry | Frozen sections | Immunofluorescence | Paraffin sections | Western blot |
| :---: | :---: | :---: | :---: | :---: |
| + | + | + | - | + |

## Format

Produced in tissue culture, contains no host Ig. Antibodies are affinity purified and presented in PBS with 0,02\% sodium azide.
Stored at $4^{\circ} \mathrm{C}-8^{\circ} \mathrm{C}$, shelf life is at least 24 months after purchase.

## Dilution advice

> Flow cytometry $(0,5-1,0 \mu \mathrm{~g} /$ million cells in $0,1 \mathrm{ml})$.
$>$ Immunoblotting ( $1-2 \mu \mathrm{~g} / \mathrm{ml}$ ).
$>$ Immunofluorescence (0,5-1,0 $\mu \mathrm{g} / \mathrm{ml}$ ).
$>$ Immunohistology (1-2 $\mu \mathrm{g} / \mathrm{ml}$ for 30 min at RT; an appropriate antigen retrieval method for staining of formalinfixed tissues has not been established to date).

## Positive control

Human PBL or tonsil.
