

FITC-C6-LEHD-FMK

### PRODUCT INFORMATION SHEET

# Catalog number: 13407, 13409 Unit size: 1 mg, 100 ug

Component Storage Amount Cat No. 13407 Cat No. 13409 FITC-C6-LEHD-FMK Freeze (<-15 °C), Minimize light exposure 100 ug

# OVERVIEW

Activation of caspases plays a central role in apoptosis. FITC-C6-LEHD-FMK provides a convenient means for sensitive detection of activated caspase-9 in living cells. FITC-LEHD-FMK is cell permeable, nontoxic, and irreversibly binds to activated caspase-9 in apoptotic cells. The FITC label allows for direct detection of activated caspases in apoptotic cells by fluorescence microscopy, flow cytometry, or fluorescence plate reader.

### AT A GLANCE

### Important notes

It is important to store at <-15 °C and should be stored in cool, dark place.

It can be used within 12 months from the date of receipt.

# SAMPLE EXPERIMENTAL PROTOCOL

Following protocol only provides a guideline, and should be modified according to your specific needs.

General Solution Caspase Assays Using AMC, AFC, pNA, R110 and ProRed Substrates

- 1. Prepare a 10 mM stock solution in DMSO.
- 2. Prepare a 2X caspase substrate (50  $\mu$ M) assay solution as the following: 50  $\mu$ L substrate stock solution, 100 µL DTT (1M), 400 µL EDTA (100 mM), 10 mL Tris Buffer (20 mM), pH =7.4.
- 3. Mix equal volume of the caspase standards or samples with 2X caspase substrate assay solution, and incubate the solutions at room temperature for at least 1 hour.
- 4. Monitor the fluorescence using a fluorescence microplate reader, or absorbance using an absorbance microplate reader.

#### Cell Caspase Assays Using Cell-Permeable FMK Caspase Probes

- 1. Prepare a 2-5 mM stock solution in DMSO.
- 2. Treat cells as desired.
- 3. Prepare a 2X permeable caspase substrate (20 µM) assay solution by diluting the DMSO stock solution (from Step 2.1) in Hanks with 20 mM Hepes buffer (HHBS).
- 4. Mix equal volume of the treated cells with 2X caspase substrate assay solution (from Step 2.3), and incubate the cells in a  $37^{\circ}$ C, 5% CO<sub>2</sub> incubator for at least1 hour.
- 5. Wash the cells with HHBS for at least once.
- 6. Monitor the fluorescence intensity by a flow cytometer, a fluorescence microscope or a fluorescence microplate reader.

Cell Caspase Assays Using Cell-Permeable FMK Caspase Probes (For #13470-13476 only)

- 1. Prepare a 250X stock solution by adding 50 µL DMSO into the vial.
- 2. Treat cells as desired.
- 3. Add 250 X DMSO stock solution into the cell solution at a 1:250 ratio (such as 2  $\mu L$  to 500  $\mu L$  cells), and incubate the cells in a 37°C, 5% CO2 incubator for 1 hour
- 4. Wash the cells with HHBS for at least once.

1 mg

5. Monitor the fluorescence intensity by flow cytometer, fluorescence microscopy or fluorescent microplate reader.
