

Bulk Anti-Human CD119 (GIR 208) Antibody

Bulk anti-human CD119 antibody (GIR 208)

T		n	P 4
Proc	11167	Ken	efits:

ichorbio's bulk anti-human CD119 antibody (GIR 208) is manufactured in a cGMP compliant facility. ichorbio's low endotoxin antibodies have half the endotoxin of comparable antibodies from Bio X Cell at less than 1.0 EU/mg. If ichorbio's low endotoxin antibodies are not low enough we also offer ultra low endotoxin antibodies which have even less endotoxin (0.5EU/mg) at an even higher purity (98% versus 95%). ichorbio: the best antibodies for *in vivo* research

which have even less endotoxin (0.5EU/mg) at an even higher purity (98% versus 95%). ichorbio: the best antibodies for <i>in vivo</i> research.
Target:
CD119
Clone:
GIR 208
Isotype:
Mouse IgG1
Other Names:
Interferon gamma receptor 1, IFN-gamma receptor 1, IFN-gamma-R1, CDw119, Interferon gamma receptor alphachain2, IFN-gamma-R-alpha
Uniprot:
<u>P15260</u>
Host:
Mouse
Species Reactivity:
Human
Specificity:
Bulk anti-human CD119 antibody (GIR 208) recognizes Human IFN gamma R alpha
Purification Method:

ichor.bio // hello@ichor.bio

depending on the species and isotype.

Products are for research use only. Not for use in diagnostic or therapeutic procedures. ichorbio, ichorbio logo and all other trademarks are the property of ichorbio LTD © ichorbio 2023 Page 1

This monoclonal antibody was purified using multi-step affinity chromatography methods such as Protein A or G

Antigen Distribution:

The IFN-gamma receptor is expressed at moderate levels on virtually every cell with the exception of erythrocytes.

Background:

Interferon-gamma (IFN-gamma) exerts its biologic effects by interacting with a single high affinity receptor, IFNgamma receptor. This receptor is present on almost all cell types except mature erythrocytes. The IFN-gamma receptor consists of two polypeptide chains alpha and beta and requires association of JAK1, JAK2 and Stat1 for IFN-gamma signal transduction. In signal transduction, IFN-gamma induces tyrosine phosphorylation of IFNgamma receptor alpha (IFNGR1) leading to the formation of a docking site on the activated receptor for Stat1, which specifically activates IFN-gamma induced gene transcription. The IFN-gamma receptor is structurally related to the recently cloned IL-10 receptor. GIR 208 binds IFNGR1 and blocks binding of IFN-gamma to the receptor.

Immunogen:

Human IFN-gamma R alpha, Purified from human placenta

Concentration:

 $1.0 - 5.0 \, \text{mg/ml}$

Formulation:

0.01 M phosphate buffered saline (PBS) pH 7.2, 150 mM NaCl with no carrier protein, potassium or preservatives added, BSA and Azide free.

Purity:

>95% by SDS-PAGE and HPLC

>98% by SDS-PAGE and HPLC

Endotoxin:

? 1.0 EU/mg as determined by the LAL method

? 0.75 EU/mg as determined by the LAL method

Aggregation:

Aggregation level ? 5%

Aggregation level? 1%

IMPACT Pathogen Test:

We use the IMPACT test generated by IDEXX Laboratories to guarantee our Ultra Low Endotoxin antibodies are pathogen free. Our mouse antibodies are tested for: Mycoplasma spp. Mycoplasma pulmonis Sendai virus Mouse hepatitis virus Pneumonia virus of mice Minute virus of mice Mouse parvovirus (MPV1-5) Theiler's murine

encephalomyelitis virus Murine norovirus Reovirus 3 Mouse rotavirus Ectromelia virus Lymphocytic choriomeningitis virus Polyoma virus Lactate dehydrogenase-elevating virus Mouse adenovirus (MAD1, MAD2) Mouse cytomegalovirus K virus Mouse thymic virus Hantaan virus Corynebacterium bovis Corynebacterium spp. (HAC2)

Storage:

This antibody is stable for at least 4 weeks when stored at 2-8°C. For long term storage, aliquot in working volumes without diluting and store at -20°C or -80°C. Avoid repeated freeze thaw cycles.

Applications:

Immunoprecipitation, Western Blot, ELISA, Neutralization, Flow Cytometry

Application Notes:

Each investigator should determine their own optimal working dilution for specific applications.

Use:

Products are for research use only.

Isotype Control:

Mouse IgG1 Isotype Control for In Vivo - Low Endotoxin [HKSP] (ICH2247)
